

# eXtreme Timber

products for life

Strong, durable and sustainable timber products  
manufactured to withstand the test of time

**eXtreme Timber is a natural, sustainable and appealing product with excellent durability and exceptional strength, plus added exterior grade performance to create a product you can trust.**

Using radiata pine, one of the most versatile building products currently available, eXtreme Timber has all large defects removed to ensure maximum structural performance as well as aesthetic beauty for any setting.

Size and stability is enhanced by the use of finger jointing and lamination technology in all products. The adhesive systems selected are all service class 3 for external in or above ground applications. This adhesive system has excellent bond strength and for many years has been used in a range of exposed applications including timber boat manufacture.

This adhesive system is combined with time proven timber preservation systems that are impregnated into the plantation grown timber, creating a long lasting, sustainable product with great durability and performance.
